

Dear Hiring Team,

I am excited to apply for the Associate Software Engineer position at Accuris. I recently completed my Bachelor of Engineering in Computer Science and have developed a strong foundation in software development through internships, academic projects, and hands-on learning.

During my Full Stack Development internship at KodNest, I worked with Java, Spring Boot, React.js, SQL, and REST APIs to develop database-driven applications and backend workflows. Additionally, my Generative AI internship at MindMatrix.io provided exposure to AI-powered workflows, API integrations, and intelligent automation using modern AI technologies.

I have built projects involving backend development, microservice-based architectures, databases, and AI-powered applications using technologies such as Java, Python, Spring Boot, FastAPI, PostgreSQL, Redis, Docker, and AWS. These experiences have strengthened my problem-solving abilities and my understanding of software engineering best practices.

I am particularly interested in Accuris because of its long-standing impact on engineering innovation and its mission of building knowledge-driven platforms that help solve complex technical challenges. I am eager to contribute, learn from experienced engineers, and grow as a software developer within your organization.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my skills and enthusiasm can contribute to Accuris.

Sincerely,

Sushmita D
